

Windows Static IP juhend

Vajutage parema hiireklahviga interneti ikooni peale ja valige “Ava Võrgu ja ühiskasutuskeskus”

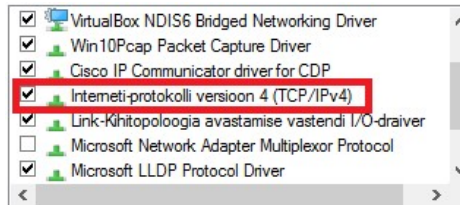

Vajutage “Ethernet”

Vajutage “Atribuudid”

Vajutage “Interneti-protokollid versioon 4”

Vajutage “Kasuta järgmist IP-aadressi”, kirjutage IP address, mask ja gateway, 2 DNS-serverit siis vajutage “OK”.

The image shows the "Interneti-protokollid versioon 4" configuration dialog box. The "Kasuta järgmist IP-aadressi" (Use the following IP address) radio button is selected and highlighted with a red box and the number 1. Below it, the "IP-aadress:" field is highlighted with a red box and the number 2. The "Alamvõrgu mask:" field is also highlighted with a red box and the number 2. The "Vaikelüüs:" field is highlighted with a red box and the number 2. The "Kasuta järgmisi DNS-serveri aadresse:" (Use the following DNS server addresses) radio button is selected. The "Eelistatav DNS-server:" field contains "81 . 20 . 144 . 1" and is highlighted with a red box and the number 3. The "Alternatiivne DNS-server:" field contains "81 . 20 . 150 . 2" and is highlighted with a red box and the number 3. At the bottom, the "OK" button is highlighted with a red box and the number 4. There is also a "Loobu" (Cancel) button and a "Täpsemalt..." (Advanced...) button.

1 – DNS Server 81.20.144.1

2 – DNS Server 81.20.150.2
